

OrbitPlans

Multi-Tenant Starlink Management

A comprehensive solution for large-scale Starlink deployments, empowering Virtual Network Operators from Starlink Resellers to MSPs to monetize next-generation connectivity.

Additional Hardware - Not Required !

OrbitPlans works by leveraging direct API integration and communication to individual Starlink terminals. Any site with a Starlink terminal can be added instantly; no extra hardware is required. When you are ready, upgrade to Konnect SD-WAN to add advanced controls like content filtering, traffic shaping, and optimized connectivity for multi-terminal sites.

Automation with QuotaKontrol - Usage Thresholds, Alerts, and Reports

Custom site monitors can start/stop service, toggle Mobile Priority Data, and trigger notifications based on thresholds / usage patterns. Detailed usage reports streamline billing for improved accountability. Gain actionable insights from trends, historical performance data, and time/location/usage correlations.

Mapping & Analytics

View historical location for all assets, with intuitive filters and usage analytics to understand patterns and behaviors. Interactive maps and crowd-sourced Starlink performance overlays bring real-world context to individual site performance.

Integrated Billing Add-on

The optional OrbitBills payment service enables direct customer billing within the platform. Set up recurring plans with support for overage charges and data top-ups, and manage one-time fees for hardware and technical services - all from a unified interface that simplifies billing workflows and supports scalable service delivery.

Pooled Data Plans

Custom Plans with Organizational Hierarchy

Create custom data plans and hierarchies that align with your multi-organization business structure.

Subdivide Starlink pooled data into individually attributable pools and usage accounts. Extend role-based access to the cloud portal to individuals and groups and share only the data you choose.

Quotas and Automation

Simplify data management with quotas and automated controls that can be customized at the organization level or down to the individual site.

Manage multiple sites simultaneously through custom organization policy orchestration, alerts/notifications, and batch processing.

Historical Data with Scheduled Reports

Use historical usage data and comprehensive reports to drive organization wide billing. Organize reports based on Accounts, Organizations, Pools, or individual Service Lines

Seamlessly manage standalone Starlink installs with OrbitPlans. Start optimizing your deployments now, with the flexibility to upgrade to full SD-WAN capabilities when you're ready for the next level.
