# Orbit™

## Cloud-Managed VNO Platform for Connectivity at Scale

Orbit is a cloud-native platform that enables service providers and enterprises to operate as Virtual Network Operators (VNOs). With multi-tenancy, usage tracking, and flexible plan management, Orbit centralizes control of connectivity, billing, and policy for large deployments.

Built for next-generation wireless, Orbit delivers Starlink management today while providing a scalable foundation for tomorrow. It empowers operators to monetize connectivity with full **visibility**, **control**, and a **seamless customer experience**.

## Simplify Service Delivery, **Maximize Profitability**

Create new revenue opportunities and **capture more value** from satellite subscription service

**Multi-Tenant Control**
Multi-organization role-based access with the ability to extend access and policy controls to customers, organizations, and individual sites

**Flexible Plan Management**
Create pooled data plans, enforce quotas, and automate policies across fleets of terminals.

**Integrated Billing & Invoicing**
Automate subscriptions, overages, and payments with branded invoices and profitability analytics.

**Scalable & Extensible**
Centralized management standalone service or with seamless integration into Kognitive's Konnect SD-WAN

### OrbitPlans - Subscription Management

Purpose-built tools to manage connectivity plans at fleet scale

**Custom Data Pools & Plans**
Subdivide bandwidth into attributable pools across organizations, with distinct data plans for individual sites

**Policy Automation**
Schedule service start/stop and automate pause/resume based on usage with quota thresholds, detailed alerts

**Site and Router Management**
Manage terminals and standardize router configs across sites

**Analytics & Mapping**
Track usage trends, terminal locations, and anomalies with visual reporting

### OrbitBills - Integrated Billing

Turn connectivity service into branded, automated revenue

**Product Customization**
Build custom plans with overage charges & one-time fees

**White-Labeled Invoicing**
Add your logo and brand to billing data linked to OrbitPlans usage and additional services

**Automated Billing Cycles**
Schedule and preview invoice generation, roll-ups, and delivery to sub-orgs with dashboards for A/R status

**Profitability Insights**
Monitor revenue, margins, and plan efficiency with actionable KPIs
